

Changing Biomes

As was mentioned in the biome lesson, climate plays the key role in determining the diversity of plants and animals within the biome. Keeping this in mind, take a few minutes to consider and write down your answers to the following questions.

1. What happens to an animal species that has evolved for one biome if the climate within the biome changes?
2. What happens to a plant species that has evolved for one biome if the climate within the biome changes?
3. If a plant species dies due to climate change, what happens to the animals that eat that plant?
