

Creating a Classroom Green Wall

You have the opportunity to create a legacy and be forever remembered in this Biology classroom. Your task, as a small group is to research, design, and cost out a *living wall* for our classroom. The proposals will be presented to and voted on by your peers. I will commit to purchasing the required materials for the winning design and using some class time to build it.

The designs must include the following:

- ✓ A specific, itemized list of building materials and cost
- ✓ A list of the proposed plant species to grow
- ✓ A visual representation of the completed project
- ✓ A written rationale for your choices- backed by research

The main concern of Administrative and custodial staff is that our green wall will be messy, and difficult to maintain. Please consider this in your design.

You may also want to consider a practical use for the plant species: air purifiers, herbs, fruit production, aromatics ect.
