

### Global Environmental Issues: Primer

---

Below is a list of 15 current environmental issues threatening the stability of our world. Working with a partner you have two tasks.

- A) Rank the environmental issues from 1-15, 1 meaning it is the most important to you and 15 meaning it is the least important.
- B) Research the key locations on our round earth in which these issues are having the largest effect on the environment and indicate them on the map provided. \*Please note: Antarctica must be added. Please color code your work and include a key.

**\*\*If you are unsure what one of the issues means, please research it yourself or ask me for assistance.**

Ocean Acidification

Loss of Biodiversity

Deforestation

Global Climate Change

Drought

Flood

Forest Fires

Ozone Layer Depletion

Acid Rain

Water Security

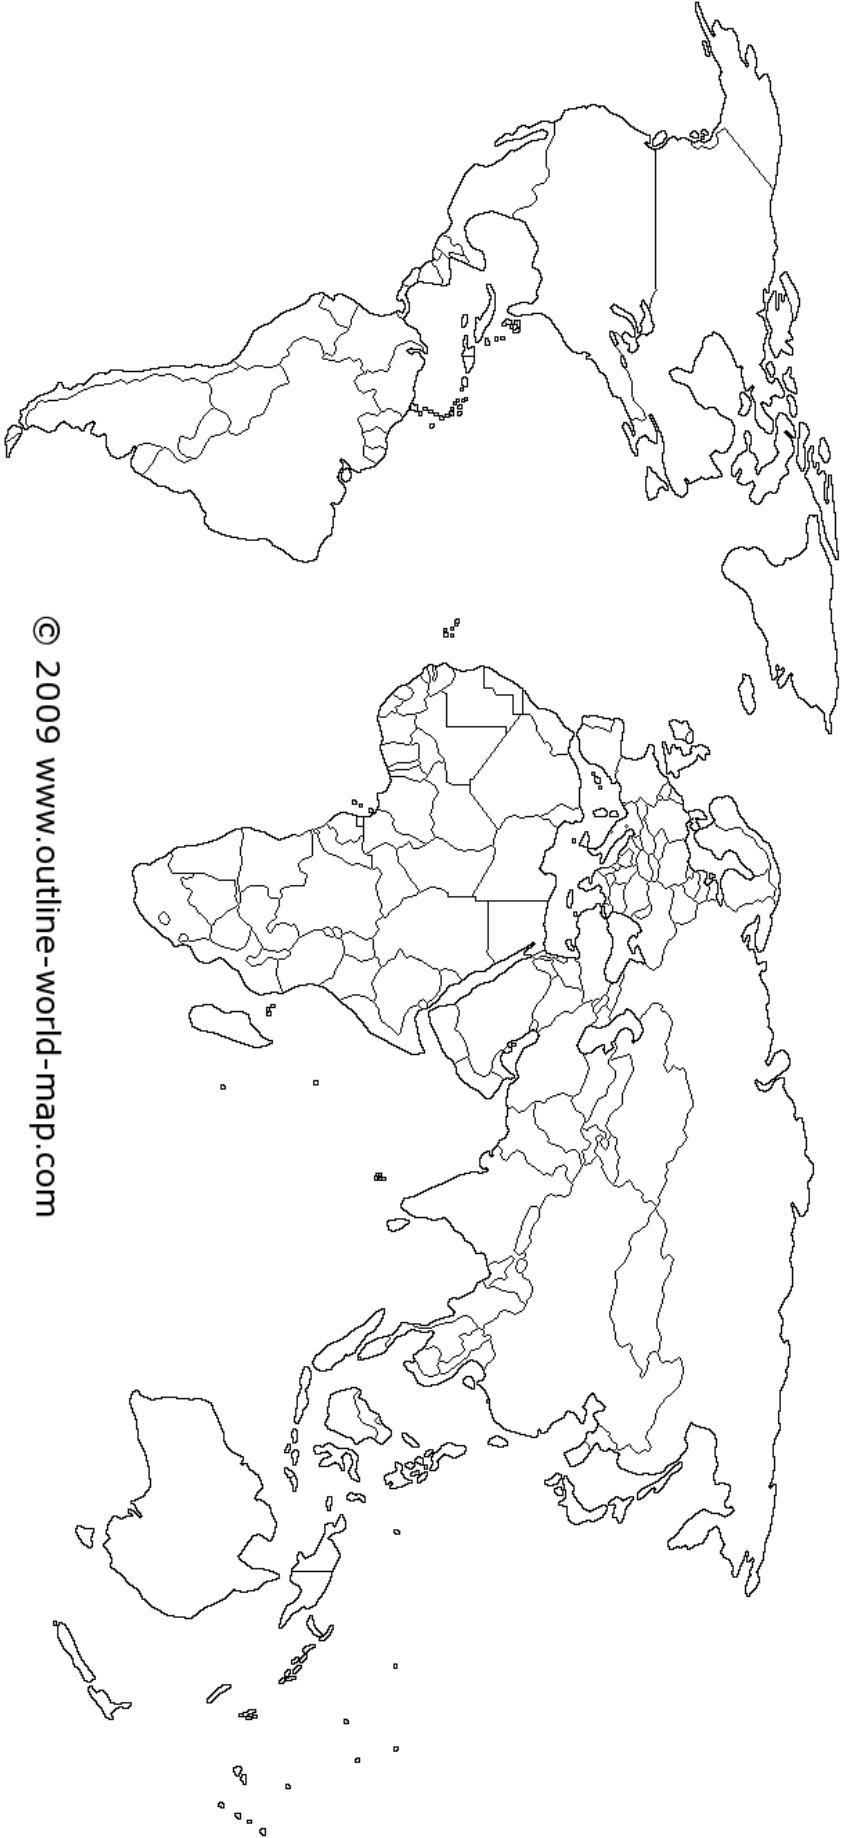

Water Pollution

Waste Disposal

Food Security

Air Pollution

Soil Pollution
