

### Saskatchewan's Watersheds Report and Presentation

---

Use the information learned about watersheds and pollution to complete a student directed study relating to SK. Complete this on a piece of loose-leaf and be prepared to present your information to the rest of class.

1. Choose a Saskatchewan watershed.
2. What are the water uses of that watershed?
3. Name of the community that gets drinking water from the watershed.
4. What are the sources of point source pollution?
5. What are the sources of nonpoint source pollution?
6. How does government regulate activities in this watershed?
7. Identify one type of development that exists in this watershed.
8. What environmental impacts does that development have?
9. Assess the implications of these impacts on the watershed.
10. How could the impacts be mitigated (reduced/prevented)?
